

The screenshot shows a SQL playground interface. At the top, there's a toolbar with icons for running, saving, and other functions. The main area contains a SQL query:

```
1 Select * from pond_user_preview_download
2 where pond_item_common = '119029803'
```

Below the query, there's a section labeled "Output" showing the results of the query. The results are displayed in a table with the following columns: `pond_user`, `pond_item_common`, and `created_at`. The table contains one row of data:

	pond_user	pond_item_common	created_at
1	1037773	119029803	2022-05-04 19:27:34.000000
